

The definitive reference book
in clinical microbiology

Manual of Clinical Microbiology

2nd Edition

EDITORS

Edwin H. Lennette

*Viral and Rickettsial Disease Laboratory,
California Department of Health, Berkeley*

Earle H. Spaulding

*Department of Microbiology and Immunology,
Temple University Health Sciences Center, Philadelphia*

Joseph P. Truant

Advance Medical Laboratories, Pontiac, Michigan

Since publication in August 1974, the completely revised and up-dated second edition of *Manual of Clinical Microbiology* has been established as an extraordinarily useful guide for all involved in laboratory work. It has also been widely adopted as a textbook, both for medical students and medical technology students. If you do not already own a copy of this exceptional book, please take this opportunity to place your order today.

In the book, the appropriate methods for complete microbiological examination of clinical specimens are fully presented, as are the correct procedures for the isolation and identification of bacteria, fungi, viruses, and parasites. While emphasis is given to those organisms most commonly found in human infection, the rarer organisms are not ignored.

Contents by Section

- General
- Aerobic Bacteria
- Spirochetes
- Anaerobic Bacteria
- Susceptibility Testing of Antimicrobial Agents
- Immunoserological Tests
- Fungi
- Parasites
- Viruses and Rickettsiae
- Infection Prevention - Quality Control
- Media, Reagents, and Stains

The book is available hardbound, at \$20.00, or bound in a sturdy flexible cover, at \$16.00. It contains 970 pages and 246 illustrations.

(Available to ASM members at \$12.00 for the hard cover, \$10.00 for the flexible cover. If ordering at member rates, please remit payment with order.)

Please direct all inquiries and orders to the publisher:

SUBJECT INDEX

VOLUME 40

- Actinomycetales*
 - reproduction, 469
- Actinomycetes*
 - control of sporulation, 469
 - development, 469
 - differentiation, 469
 - life cycles, 469
 - spore formation, 469
- Aerobic degradation*
 - enzymatic steps, 403
 - of purines, 403
- Aerobic soils*
 - sulfur cycle, 698
- Aerotaxis*
 - in spirilla, 55
- Amino acid catabolism*
 - branched chain, 42
 - enoyl-CoA hydratases, 42
 - enzymes common to, 42
 - inhibition of growth by, 42
- Antibiotic resistance*
 - mutations that affect sporulation, 908
- Aquaspirillum*, 55
- Asexual life cycle*
 - in *N. crassa*, 1
- Asporogenous mutants*, 908
- Bacillus*
 - bacteriocins, 722
- Bacterial endospore formation*
 - genetic aspects, 908
- Bacterial infections*
 - B cells, 284
 - cell-mediated immune mechanisms, 284
 - humoral antibodies, 284
 - T cells, 284
- Bacterial plasmids*
 - molecular rearrangements, 168
 - plasmid designations, 168
 - plasmid gene abbreviations, 168
 - uniform nomenclature for, 168
- Bacterial spore coat*
 - coat polypeptides, 360
 - layers, 360
 - morphogenesis, 360
 - outer coat, 360
 - structure, 360
- Bacteriocins*
 - classification, 722
 - detection, 722
 - genetic determinants, 722
 - in gram-positive bacteria, 722
 - nomenclature, 722
 - properties, 722
- Bacteriophage*
 - d'Herelle's discovery, 793
 - for spirilla, 55
 - Twort's discovery, 793
- Bacteriophage T4*
 - effect of canavanine on, 314
 - genome, 847
 - giant bacteriophage, 314
 - head length control, 314
 - morphogenesis, 314
 - size determination of heads, 314
- B cells*
 - in humoral antibody production, 284
 - cell-mediated immunity, 284
- Biochemical genetics*
 - in *N. crassa*, 1
- Branched-chain amino acids*, 42
- Canavanine*
 - effect on phage T4, 314
 - mechanisms, 314
- Cerulenin*
 - action mechanism, 681
 - fatty acid synthesis inhibitor, 681
 - physicochemical properties, 681
 - producing strain, 681
- Chemoheterotrophic spirilla*, 55
- Chemotaxis*
 - in spirilla, 55
- Clostridium*
 - bacteriocins, 722
- Coccoid bodies*
 - in spirilla, 55
- Conidia*
 - biochemical changes in germination of, 1
 - structure and composition in *N. crassa*, 1
- Conidial germination*
